

# 124 Ways Sugar Can Ruin Your Health

by Nancy Appleton, Ph.D

Author of the book "Lick The Sugar Habit"

In addition to throwing off the body's homeostasis, excess sugar may result in a number of other significant consequences. The following is a listing of some of sugar's metabolic consequences from a variety of medical journals and other scientific publications.

1. Sugar can suppress the immune system
2. Sugar upsets the mineral relationships in the body
3. Sugar can cause hyperactivity, anxiety, difficulty concentrating, and crankiness in children
4. Sugar can produce a significant rise in triglycerides
5. Sugar contributes to the reduction in defense against bacterial infection (infectious diseases)
6. Sugar causes a loss of tissue elasticity and function, the more sugar you eat the more elasticity and function you lose
7. Sugar reduces high density lipoproteins
8. Sugar leads to chromium deficiency
9. Sugar leads to cancer of the breast, ovaries, prostate, and rectum
10. Sugar can increase fasting levels of glucose
11. Sugar causes copper deficiency
12. Sugar interferes with absorption of calcium and magnesium
13. Sugar can weaken eyesight
14. Sugar raises the level of neurotransmitters: dopamine, serotonin, and norepinephrine
15. Sugar can cause hypoglycemia
16. Sugar can produce an acidic digestive tract
17. Sugar can cause a rapid rise of adrenaline levels in children
18. Sugar malabsorption is frequent in patients with functional bowel disease
19. Sugar can cause premature aging
20. Sugar can lead to alcoholism
21. Sugar can cause tooth decay
22. Sugar contributes to obesity
23. High intake of sugar increases the risk of Crohn's disease, and ulcerative colitis
24. Sugar can cause changes frequently found in person with gastric or duodenal ulcers
25. Sugar can cause arthritis
26. Sugar can cause asthma
27. Sugar greatly assists the uncontrolled growth of *Candida Albicans* (yeast infections)
28. Sugar can cause gallstones
29. Sugar can cause heart disease
30. Sugar can cause appendicitis
31. Sugar can cause multiple sclerosis
32. Sugar can cause hemorrhoids
33. Sugar can cause varicose veins
34. Sugar can elevate glucose and insulin responses in oral contraceptive users
35. Sugar can lead to periodontal disease
36. Sugar can contribute to osteoporosis
37. Sugar contributes to saliva acidity
38. Sugar can cause a decrease in insulin sensitivity
39. Sugar can lower the amount of Vitamin E in the blood
40. Sugar can decrease growth hormone
41. Sugar can increase cholesterol
42. Sugar can increase the systolic blood pressure

43. Sugar can cause drowsiness and decreased activity in children
44. High sugar intake increases advanced glycation end products (AGEs)(Sugar bound non-enzymatically to protein)
45. Sugar can interfere with the absorption of protein
46. Sugar causes food allergies
47. Sugar can contribute to diabetes
48. Sugar can cause toxemia during pregnancy
49. Sugar can contribute to eczema in children
50. Sugar can cause cardiovascular disease
51. Sugar can impair the structure of DNA
52. Sugar can change the structure of protein
53. Sugar can make our skin age by changing the structure of collagen
54. Sugar can cause cataracts
55. Sugar can cause emphysema
56. Sugar can cause atherosclerosis
57. Sugar can promote an elevation of low density lipoproteins (LDL)
58. High sugar intake can impair the physiological homeostasis of many systems in the body
59. Sugar lowers the enzymes ability to function
60. Sugar intake is higher in people with Parkinson's disease
61. Sugar can cause a permanent altering the way the proteins act in the body
62. Sugar can increase the size of the liver by making the liver cells divide
63. Sugar can increase the amount of liver fat
64. Sugar can increase kidney size and produce pathological changes in the kidney
65. Sugar can damage the pancreas
66. Sugar can increase the body's fluid retention
67. Sugar is enemy #1 of the bowel movement
68. Sugar can cause myopia (nearsightedness)
69. Sugar can compromise the lining of the capillaries
70. Sugar can make the tendons more brittle
71. Sugar can cause headaches, including migraine
72. Sugar plays a role in pancreatic cancer in women
73. Sugar can adversely affect school children's grades and cause learning disorders
74. Sugar can cause an increase in delta, alpha, and theta brain waves
75. Sugar can cause depression
76. Sugar increases the risk of gastric cancer
77. Sugar and cause dyspepsia (indigestion)
78. Sugar can increase your risk of getting gout
79. Sugar can increase the levels of glucose in an oral glucose tolerance test over the ingestion of complex carbohydrates
80. Sugar can increase the insulin responses in humans consuming high-sugar diets compared to low sugar diets
81. High refined sugar diet reduces learning capacity
82. Sugar can cause less effective functioning of two blood proteins, albumin, and lipoproteins, which may reduce the body's ability to handle fat and cholesterol
83. Sugar can contribute to Alzheimer's disease
84. Sugar can cause platelet adhesiveness
85. Sugar can cause hormonal imbalance; some hormones become underactive and others become overactive
86. Sugar can lead to the formation of kidney stones
87. Sugar can lead to the hypothalamus to become highly sensitive to a large variety of stimuli
88. Sugar can lead to dizziness

89. Diets high in sugar can cause free radicals and oxidative stress
90. High sucrose diets of subjects with peripheral vascular disease significantly increases platelet adhesion
91. High sugar diet can lead to biliary tract cancer
92. Sugar feeds cancer
93. High sugar consumption of pregnant adolescents is associated with a twofold increased risk for delivering a small-for-gestational-age (SGA) infant
94. High sugar consumption can lead to substantial decrease in gestation duration among adolescents
95. Sugar slows food's travel time through the gastrointestinal tract
96. Sugar increases the concentration of bile acids in stools and bacterial enzymes in the colon
97. Sugar increases estradiol (the most potent form of naturally occurring estrogen) in men
98. Sugar combines and destroys phosphatase, an enzyme, which makes the process of digestion more difficult
99. Sugar can be a risk factor of gallbladder cancer
100. Sugar is an addictive substance
101. Sugar can be intoxicating, similar to alcohol
102. Sugar can exacerbate PMS
103. Sugar given to premature babies can affect the amount of carbon dioxide they produce
104. Decrease in sugar intake can increase emotional stability
105. The body changes sugar into 2 to 5 times more fat in the bloodstream than it does starch
106. The rapid absorption of sugar promotes excessive food intake in obese subjects
107. Sugar can worsen the symptoms of children with attention deficit hyperactivity disorder (ADHD)
108. Sugar adversely affects urinary electrolyte composition
109. Sugar can slow down the ability of the adrenal glands to function
110. Sugar has the potential of inducing abnormal metabolic processes in a normal healthy individual and to promote chronic degenerative diseases
111. I.Vs (intravenous feedings) of sugar water can cut off oxygen to the brain
112. High sucrose intake could be an important risk factor in lung cancer
113. Sugar increases the risk of polio
114. High sugar intake can cause epileptic seizures
115. Sugar causes high blood pressure in obese people
116. In Intensive Care Units: Limiting sugar saves lives
117. Sugar may induce cell death
118. Sugar may impair the physiological homeostasis of many systems in living organisms
119. In juvenile rehabilitation camps, when children were put on a low sugar diet, there was a 44% drop in antisocial behavior
120. Sugar can cause gastric cancer
121. Sugar dehydrates newborns
122. Sugar can cause gum disease
123. Sugar increases the estradiol in young men
124. Sugar can cause low birth weight babies

---

"Evaluation of Health Aspects of Sugar Contained in Carbohydrate Sweeteners." FDA Report of Sugars Task Force. 1986: 39. I find it hard to believe. I am on the side that everything in moderate way is good for and too much is bad. But I grew up in a farm and grandmother used to make our on sugar from sugar cane and we were all very healthy with no doubts. We use sugar around the house for everything. Sugar is one of those things that we love, but plays havoc with with our body in many ways. Refined sugar is present in all those desserts we crave and in fizzy soda drinks. Every time we gulp down aerated drinks, we are giving our body a sugar high and our body craves for more. Many people can suffer from sugar addiction without even knowing it since it can creep up on us very insidiously. All the sugars that enter your body gets digested into glucose and fructose. Glucose is essential for your body and your body can synthesize it if there is not enough. However, fructose is not needed by the body. It can only be metabolized by the liver and which in turn, converts it to fats. SUGAR, Friend or Foe? by Nadine, N.D., C.N.S. Greetings to all on this glorious November day. As we enter into the "holiday" season Below I have pasted in an article that lists 78 Ways Sugar Can Ruin Your Health. These have been extracted from a variety of medical journals and scientific publications. Due to space in this ezine, I did not include the pages of references. I want you to read and discover 25 ways sugar can ruin your health. You will be surprised at how easy sugar can attack your health. Dr. Nancy Appleton wrote a book in 2004 called "Lick the Sugar Habit," with the ways that medical journals and other scientific publications have documented that sugar wrecks your health. She gives 78 ways, with an impressive references list. But I'll share 25 with you here, in case you're looking for some good reasons to stop eating high-fructose corn syrup and refined sugars! So often people wonder why they're experiencing health problems and don't connect it to what they're eating. Sugar can suppress the immune system. Sugar can upset the body's mineral balance.
