About the Author Mr. Rinker has a unique and diversified background that is perfectly suited to author a book on firearm ballistics. His love affair with firearms started at the age of six when his father, a military officer and newspaperman, taught him the manual of arms and gun safety. He started reading and studying about firearms and ballistics while still a youth. He has owned and fired most types of firearms, both antique and modern. He also acquired from his father a love for the printed word and has written and been published in national magazines, mostly on aviation, firearms, travel, history, and antiques. Mr. Rinker is a contributing editor to a national firearm magazine and he has written five books. His own photographs have accompanied many of his articles. Some intellectual readers want his writing to be more exact in grammatical technique, but he writes for the average reader in a style they can easily follow on even the most advanced subjects, and most readers appreciate that quality. While attending college, Mr. Rinker was employed as an armed police officer at a major airport. He also worked as a tool and die apprentice during the day while attending college at night. When his foreman found out about his knowledge of firearms, some of his early machine shop labor involved repair and restoration on antique guns from the supervisor's private collection. Educated as an industrial engineer, he owned and operated his own tool-die and machine shop where some of the work was on firearms, including big guns for the U. S. Navy. This work included design and research on modern shipboard weapons. He has also been trained and employed as an airline transport pilot, commercial-instrument-multi-engine aircraft pilot and gold seal flight instructor. He taught aeronautics in both the classroom and the air to Naval Aviators during the Vietnam War. He has degrees in both Industrial Engineering and Aviation Science. He is married and has adult children and grandchildren.
