20. Orthodontics and orthognathic surgery. Orthognathic surgery is concerned with the correction of dento-facial deformity. In the vast majority of cases a combined surgical and orthodontic approach is required to achieve an optimum result. 20.1. INDICATIONS. 20.2. diagnosis and treatment planning. An integrated team approach is essential as this allows the surgeon and orthodontist to produce a coordinated treatment plan tailored to an individual patient's needs. This is best achieved by holding joint clinics where treatment can be discussed with the prospective patient. In some centres a psychologist is also a member of the team, helping to identify those patients with unrealistic expectations of treatment. Orthodontics and Orthognathic Surgery book. Orthognathic surgery is the art and science of diagnosis, treatment planning and execution of treatment by combining orthodontics and oral and maxillofacial surgery to correct skeletal, dental and soft tissue deformities of the jaws and associated structures. Problem-oriented diagnosis and treatment planning approach is a well-established approach in orthodontics and maxillofacial surgery and can be used in patients who are candidates for orthognathic surgery. The method involves collecting adequate information about the patient and distilling from it. The information can then be used to generate a problem list and outline the treatment strategy. The sequence of database collection and treatment planning is outlined in Table 6.1. Table 6.1. Orthodontics for Orthognathic Surgery Larry M. Wolf Larry olfor ord, d, DMD Eber Eber L. L.
