

Into the Silent Land Travels in Neuropsychology

By Paul Broks

Atlantic Monthly Press. Paperback. Book Condition: New. Paperback. 256 pages. Dimensions: 8.0in. x 5.4in. x 0.8in. Into the Silent Land is a collection of case studies and short tutorials on neuropsychology, which is the science of analyzing the relationship between personality, performance, and the anatomical and physiological structure of the brain. Fusing classic cases of neuropsychology with the authors own case studies, personal vignettes, philosophical debate, and thought provoking riffs and meditations on the nature of neurological impairments and dysfunctions. Some highlights include: I Dont Love You Anymore, Do I, Love: two men who suffer almost mirror image traumatic lesions to the brain learn to cope with the loss of their ability to empathize with other human beings, thus living a life without highs or lows, only sedation. This recalls the classic case of railway worker named Finneas Gage. Gage accidentally had a railroad spike slammed into his head, piercing his frontal lobe. Miraculously, he wasnt killed, but surgeons of the day were unable to extract the spike for fear that it would cause further damage. Thus Finneas was forced to live the rest of his life with the spike in place in his head. As a result of the damage...

Reviews

Thorough guide for pdf fanatics. We have read through and i also am confident that i will gonna read once more once more later on. You wont sense monotony at whenever you want of your own time (that's what catalogues are for concerning in the event you request me).

-- Davon Senger

A must buy book if you need to adding benefit. It really is writter in easy terms instead of difficult to understand. I found out this ebook from my dad and i advised this publication to find out.

-- Prof. Elton Gibson I

Into the Silent Land was shortlisted for the Guardian First Book Award 2003. From the reviews: 'Into the Silent Land is a small, strange, beautiful gem... Broks is as much poet as scientist... Indelible.' Atul Gawande, author of Complications. 'Beautifully written and beautifully thought through.' Professor Steven Rose, author of The Making of Memory. 'Auchcare that the act itself powerfully illuminates the brain's creative capacities.' Lauren Slater, Elle Into the Silent Land Travels in Neuropsychology. Paul Broks. Atlantic Books London First published in hardback in Great Britain in 2003 by Atlantic Books, an imprint of Grove Atlantic Ltd. Paul Broks' 'Into the Silent Land' is a collection of essays, some with connecting themes and stories and other that seem like stand-alone essays. All deal with the deeper questions of what it means to be human in an age of advanced neuroscience research. In a time when the idea of a ghost in a machine and a soul are discarded notions, what does it mean to be an 'I'. How does our mind work, when there is no central controller? Buying this book, I thought it would reflect a more medical part of neuropsychology, but instead the book is very philosophical. Interesting, but to me didn't fulfil expectations. Good for people who like philosophical thoughts about the mind body problem. John McCrone is captivated by Into the Silent Land, Paul Broks's spooky neuropsychological adventure. To be a neuropsychologist is to work precisely at the point where the mental and the physical collide. Broks's daily round takes in patients who have fallen out of trees collecting kites or had a bolt shot through the forehead in a car crash. A puncture to a particular lobe of the brain explains why one man has lost all emotion while another is gleefully exclaiming that slicing meat gives him a hard-on. Then there are the patients where the matching of the psychology and the neurology, the mind and the matter, has to go the other way.

Many of the pieces collected in *Into the Silent Land* had their origin in columns for *Prospect* magazine. This makes for a certain amount of repetition, and for a tendency to "round off" an article, sometimes enigmatically. As well as case histories, there are autobiographical fragments, literary criticism, scientific speculation and a venture into science fiction. Broks was attracted to neuropsychology, "the science of brain and mind", because he hoped to reconcile the "bright, intangible qualities of subjective experience with the dark substance of the brain". This seems an impossible task, since there is "nothing but meat inside our heads", and while experience is "a first-person business" science "operates in the third person". *Into the Silent Land* was shortlisted for the Guardian First Book Award 2003. From the reviews: 'Into the Silent Land is a small, strange, beautiful gem... Broks is a much poet a scientist... Indelible.' *Atul Gawande*, author of *Complications*.
