It was pretty good. flag 1 like · Like · see review. Mar 23, 2021 Daniel Cunningham rated it it was amazing · review of another edition. Shelves: nonfiction, biology-chem-geology, kindle, school-textbooks. This is very much an introductory geology textbook. Breadth vs depth, covers things I think anyone passingly familiar with pop-sci would already know, etc. but that was perfect for me. I could re-read it again a time or two, skip that stuff, and just focus on the mineral and rock types, their formation, faulting, etc. and get more out of this, which is always a good sign. (PDF) Introduction to Physical Geology | Mahboob Ahmedacademia.edu How do subtropical, mid latitude and continental interior deserts form? Be familiar with the different ways that winds interact with the Earth's surface to produce these different deserts. Subtropical: Located within 20-30 degrees North and South of the equator. Caused by uneven heating of Earth's surface. Most heat from the sun occurs at the equator -- it rises, condenses, and precipitation occurs. This now dry air spreads above the Earth's surface, and then descends as cold, dry air. It heats as it approaches the Earth's surface and (since it is so dry) gives us our desert climate. Mid Latitude: These occur as a result of rain shadows created by mountains (example: Oregon).
