

State of the Union Address

Excerpt: Renewable Energy

President Barack Obama

January 27, 2010

"We should put more Americans to work building clean energy facilities, **and give rebates to Americans who make their homes more energy efficient**, which supports clean energy jobs. And to encourage these and other businesses to stay within our borders, it's time to finally slash the tax breaks for companies that ship our jobs overseas and give those tax breaks to companies that create jobs in the United States of America."

"Next, we need to encourage American innovation. Last year, we made the largest investment in basic research funding in history - an investment that could lead to the world's cheapest solar cells or treatment that kills cancer cells but leaves healthy ones untouched. And no area is more ripe for such innovation than energy. You can see the results of last year's investment in clean energy - in the North Carolina company that will create 1200 jobs nationwide helping to make advanced batteries; or in the California business that will put 1,000 people to work making solar panels."

"But to create more of these clean energy jobs, we need more production, more efficiency, more incentives. That means building a new generation of safe, clean nuclear power plants in this country. It means making tough decisions about opening new offshore areas for oil and gas development. It means continued investment in advanced bio-fuels and clean coal technologies. And yes, it means passing a comprehensive energy and climate bill with incentives that will finally make clean energy the profitable kind of energy in America."

"I am grateful to the House for passing such a bill last year. This year, I am eager to help advance the bipartisan effort in the Senate. I know there have been questions about whether we can afford such changes in a tough economy; and I know that there are those who disagree with the overwhelming scientific evidence on climate change. But even if you doubt the evidence, providing incentives for energy efficiency and clean energy are the right thing to do for our future - because the nation that leads the clean energy economy will be the nation that leads the global economy. And America must be that nation."

The State of the Union Address (sometimes abbreviated to SOTU) is an annual message delivered by the president of the United States to the U.S. Congress near the beginning of each calendar year on the current condition of the nation. The message typically includes reports on the nation's budget, economy, news, agenda, achievements and the president's priorities and legislative proposals.
