

Three Breathing Exercises

*"Practicing regular, mindful breathing can be calming and energizing and can even help with stress-related health problems ranging from panic attacks to digestive disorders."
Andrew Weil, M.D.*

Since breathing is something we can control and regulate, it is a useful tool for achieving a relaxed and clear state of mind. I recommend three breathing exercises to help relax and reduce stress: **The Stimulating Breath**, **The 4-7-8 Breathing Exercise** (also called the Relaxing Breath), and **Breath Counting**. Try each and see how they affect your stress and anxiety levels.

Exercise 1:

The Stimulating Breath (also called the Bellows Breath)

The Stimulating Breath is adapted from a yogic breathing technique. Its aim is to raise vital energy and increase alertness.

- Inhale and exhale rapidly through your nose, keeping your mouth closed but relaxed. Your breaths in and out should be equal in duration, but as short as possible. This is a noisy breathing exercise.
- Try for three in-and-out breath cycles per second. This produces a quick movement of the diaphragm, suggesting a bellows. Breathe normally after each cycle.
- Do not do for more than 15 seconds on your first try. Each time you practice the Stimulating Breath, you can increase your time by five seconds or so, until you reach a full minute.

If done properly, you may feel invigorated, comparable to the heightened awareness you feel after a good workout. You should feel the effort at the back of the neck, the diaphragm, the chest and the abdomen. Try this breathing exercise the next time you need an energy boost and feel yourself reaching for a cup of coffee.

Exercise 2:

The 4-7-8 (or Relaxing Breath) Exercise

This exercise is utterly simple, takes almost no time, requires no equipment and can be done anywhere. Although you can do the exercise in any position, sit with your back straight while learning the exercise. Place the tip of your tongue against the ridge of tissue just behind your upper front teeth, and keep it there through the entire exercise. You will be exhaling through your mouth around your tongue; try pursing your lips slightly if this seems awkward.

- Exhale completely through your mouth, making a whoosh sound.
- Close your mouth and inhale quietly through your nose to a mental count of **four**.
- Hold your breath for a count of **seven**.
- Exhale completely through your mouth, making a whoosh sound to a count of **eight**.
- This is one breath. Now inhale again and repeat the cycle three more times for a total of four breaths.

Note that you always inhale quietly through your nose and exhale audibly through your mouth. The tip of your tongue stays in position the whole time. Exhalation takes twice as long as inhalation. The absolute time you spend on each phase is not important; the ratio of 4:7:8 is important. If you have trouble holding your breath, speed the exercise up but keep to the ratio of 4:7:8 for the three phases. With practice you can slow it all down and get used to inhaling and exhaling more and more deeply.

This exercise is a natural tranquilizer for the nervous system. Unlike tranquilizing drugs, which are often effective when you first take them but then lose their power over time, this exercise is subtle when you first try it but gains in power with repetition and practice. Do it at least twice a day. You cannot do it too frequently. Do not do more than four breaths at one time for the first month of practice. Later, if you wish, you can extend it to eight breaths. If you feel a little lightheaded when you first breathe this way, do not be concerned; it will pass.

Once you develop this technique by practicing it every day, it will be a very useful tool that you will always have with you. Use it whenever anything upsetting happens - before you react. Use it whenever you are aware of internal tension. Use it to help you fall asleep. This exercise cannot be recommended too highly. Everyone can benefit from it.

Exercise 3: Breath Counting

If you want to get a feel for this challenging work, try your hand at breath counting, a deceptively simple technique much used in Zen practice.

Sit in a comfortable position with the spine straight and head inclined slightly forward. Gently close your eyes and take a few deep breaths. Then let the breath come naturally without trying to influence it. Ideally it will be quiet and slow, but depth and rhythm may vary.

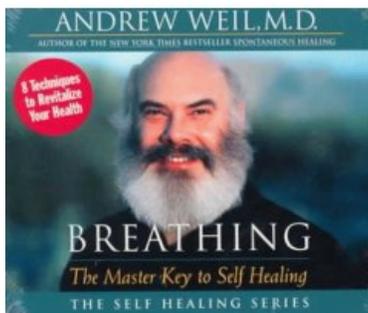

- To begin the exercise, count "one" to yourself as you exhale.
- The next time you exhale, count "two," and so on up to "five."
- Then begin a new cycle, counting "one" on the next exhalation.

Never count higher than "five," and count only when you exhale. You will know your attention has wandered when you find yourself up to "eight," "12," even "19."

Try to do 10 minutes of this form of meditation.

Breathing: The Master Key to Self Healing (The Self Healing Series) [AUDIOBOOK] (Audio CD)

From AudioFile

In Dr. Andrew Weil's self-healing series, proper breathing is considered the most important practice for healthy living. In this two-CD guide, Dr. Weil not only teaches eight fundamental breathing exercises, but also keeps listeners entertained with anecdotes from his own medical practice. There is an even stronger sense of informality in Dr. Weil's performance than in previous audio presentations. The entire production has the warm quality of listening to an interview--only no one is asking the doctor questions. This serves the higher purpose of engaging listeners, helping them to be more receptive to the methods he shares. R.A.P. (c) AudioFile, Portland, Maine

Book Description

A complete course of eight breathing exercises that Dr. Andrew Weil uses in his own life, and has prescribed to hundreds of patients over the past two decades. In plain language, Dr. Weil explains the secret of breathwork's power over our health, and its remarkable ability to influence – and even reprogram – the nervous system. A practical introduction to this crucial aspect of self healing, presented by this bestselling author and influential physician.

I recommend three breathing exercises to help relax and reduce stress: The Stimulating Breath, The 4-7-8 Breathing Exercise (also called the Relaxing Breath), and Breath Counting. Try each of these breathing techniques and see how they affect your stress and anxiety levels. Exercise 1: The Stimulating Breath (also called the Bellows Breath). The Stimulating Breath is adapted from yogic breathing techniques. Its aim is to raise vital energy and increase alertness. Here are three simple breathing exercises you can do at home that help combat anxiety. [Image credit: iStock.com/AntonioGuillem]. When anxiety becomes too common or occurs without good reason, it can be debilitating. According to the Canadian Mental Health Association, anxiety disorders affect around five per cent of the population. Although prescribed medication can help, a variety of breathing exercises designed to induce states of relaxation can also help alleviate the symptoms of anxiety relatively quickly. Here are three simple breathing exercises designed to promote feelings of well-being. Abdominal Breathing. This technique leads you to draw air more deeply into your lungs, which encourages better oxygen exchange. Find a relaxed, comfortable position, either seated or lying down. Breathe normally a few times as you bring your attention back to your surroundings. Lengthening the Exhale. Need a quick way to regain your composure when you don't have time for a full breathing exercise? This breathing exercise is the "three-part breath". To do the three-part breath, we will be breathing into the abdomen or belly, the ribs and the upper chest. We will begin by breathing into one part at a time and then we will put it all together to breathe into all three parts in one breath. It is important to never force or feel like you are pushing the breath. Instead, think about the inside of your body softening as the breath goes in and let that softening or relaxing make room for more air. I recommend three breathing exercises and techniques to help relax and reduce stress: The Stimulating Breath, The 4-7-8 Breathing Exercise (also called the Relaxing Breath), and Breath Counting. Try each of these breathing exercises and techniques and see how they affect your stress and anxiety levels. Breathing Exercise 1: The Stimulating Breath (also called the Bellows Breath).
